CORE SKILLS

Programming

C, C++ (main focus), Python,
TypeScript / JavaScript, Bash, VBA

Linux & Systems

Linux kernel, drivers, MIPS
(Realtek), STM32, Qt, json-c, IPC,
systemd

Networking

TCP/IP, DPDK, VPP, DPI / IPS /
conntrack, TLS, ACME / Let's
Encrypt, HTTP/2, HTTP/3,
Wireshark

Infrastructure

Docker, Docker Compose, nginx,
AWS EC2, Cloudflare, Netlify,
Ubuntu Server, systemd units

Backend Services

DHCP, RADIUS, TFTP, SSH,
PostgreSQL, Redis, SQLite, REST /
Webhooks, task queues

Build & Tools

CMake, Make, npm workspaces,
Vite, Git, Jira, Redmine

Math & Physics

Linear algebra, functional
analysis, probability theory,
discrete math, mechanics,
electrodynamics, optics

Languages

Russian - native; English -
technical documentation and
correspondence

EDUCATION

Novosibirsk State University (NSU)

B.Sc. track in Physical and
Technical Informatics, incomplete
degree
2018 - 2021 | Novosibirsk

MOISEY VASILENKO

SOFTWARE ENGINEER · C / C++ / LINUX

PROFILE

Software engineer with 5+ years of experience in systems programming, networking, and integrations. Main focus: C/C++ on Linux, kernel and userspace development, and server infrastructure. Since March 2025, I have worked as an independent contractor, taking projects from server preparation and containers to production deployment. I value reliability, clear code, and a calm engineering process.

EXPERIENCE

Software Engineer - Freelance / Own Projects

Mar 2025 - Present | Remote, clients from Germany and Kyrgyzstan

- **Build project infrastructure:** AWS EC2 on Ubuntu, Docker / Docker Compose, nginx, systemd units, TLS certificates with Certbot / Let's Encrypt, Cloudflare configuration, HTTP/2, HTTP/3, and edge caching.
- **Implement DevOps workflows:** idempotent Bash deployment scripts, preflight checks, PostgreSQL migrations, health checks, logging, and production profiles.
- **Shermos Bot:** Telegram service for a manufacturing company in Bishkek. Webhook + Python worker architecture with FastAPI, asyncpg, Pydantic, Redis queues and per-user locks, 18 PostgreSQL migrations, pricing engine from a real price list, 3D rendering, and Telegram Mini App on TypeScript / React / Vite.
- **Musikschule CMS Bielefeld:** SPA website for a music school in Germany. React + Vite + Tailwind + Framer Motion, image optimization with AVIF / WebP and srcSet, self-hosted nginx and HTTPS. Wrote internal engineering guides on TLS, DNS / ACME, nginx, and browser internals.
- **Emily Brautmoden Redesign:** Premium redesign for a bridal boutique in Germany plus a multilingual commercial offer microsite. React 19, TypeScript, Vite, CSS Modules with design tokens, framer-motion, react-i18next, react-helmet-async, react-router-dom 7, image pipeline, Netlify CLI deployment.
- **BudgetFlow:** Finance web application. React 18 + Vite + Tremor + TanStack Query, Node.js / Express 5, Prisma ORM, PostgreSQL, JWT authentication, rate limiting, audit log, multi-currency support with scheduled exchange-rate updates, EN / RU / DE localization, production Docker Compose profile.

EXPERIENCE CONTINUED

Software Engineer - Freelance / Own Projects

Selected project

- **Physics Tutor Platform:** Platform for tutoring physics. npm monorepo with three React 19 + Vite + TypeScript frontends, shared design system and types, Fastify 5 backend, better-sqlite3, background worker, and unified run.sh for setup, up, down, status, logs, and smoke tests.

Programming Languages Instructor - C / C++

Oct 2023 - Aug 2024 | Luxkod

- Designed and taught practical C and C++ courses for students with different levels of preparation.
- Prepared learning materials and programming exercises for individual learning paths.
- Helped students analyze compiler errors, debug code, and design small applications.

Manager / Programmer

Jan 2023 - Oct 2023 | TOO Zavod Armatura Taraz

- Developed a C++ application for automatic report generation from Excel data.
- Created VBA scripts to automate routine Excel workflows.
- Managed the full document workflow for logistics and deliveries.

C Developer

Nov 2022 - Dec 2022 | Ideco, Ekaterinburg

- Developed Linux software in C using DPDK and VPP networking stacks.
- Implemented additional API control-plane features and unit tests for DPI modules.
- Investigated and fixed bugs in traffic-filtering modules: IPS, DPI, and conntrack.
- Maintained CMake build configurations and worked with Git and Jira.

Software Engineer

Aug 2021 - Oct 2022 | In-Soft LLC, Novosibirsk

- Systems programming in C/C++ on Linux for Wi-Fi access points based on Realtek MIPS chipsets.
- Modified Linux kernel and device-driver code to extend product functionality.
- Developed userspace utilities and Bash scripts for access-point configuration.
- Worked with JSON data using json-c; deployed and supported DHCP, RADIUS, TFTP, SSH, and Docker-based environments.
- Used Git and Redmine for version control and task tracking.

Laboratory Assistant, 3rd Category

Oct 2020 - Aug 2021 | Budker Institute of Nuclear Physics, Novosibirsk

- Programmed STM32 microcontrollers for digital noise filtering from electret microphones.
